If I define $f(x) = x^{n-1} + \dots + x + 1$ and try to see what happens when I substitute $x = 0$ to it I get that $f(0) = 0$. But, if I try to find a divisor of $f(0)$ what does it mean? A: The smallest n that divides $f(0)$ is the same as the smallest n such that $f(0)$ is divisible by 5^n . (If

Diagnosis of thalamic deep white matter infarcts by CT-angiography and MR angiography. CT-angiography and MR-angiography were performed in seven patients with thalamic deep white matter infarcts to evaluate the diagnostic accuracy of these techniques in differentiating thalamic infarcts from periventricular ischemic lesions. In all patients, except one, MR-angiography demonstrated infarcts as delayed enhancement, mainly in the region of the internal capsule. CT-angiography showed a hyperdense cortex rim with no contrast enhancement of the deep white matter in patients with right thalamic infarcts, and a normal cortex rim with contrast enhancement of the deep white matter in patients with left thalamic infarcts. In three patients, the infarcts were perforating. No infarcts were found in the thalamus, internal capsule, or external capsule. The infarcts were located between the ventricles and the brain stem.
