## Hide Drive Crack Download X64

Hide Drive is a small application designed with a single goal in mind: to help you hide drive letters from any of the standard Windows panels, including Windows Explorer and My Computer. The advantages of being portable Since this is a portable program, it is important to mention that it doesn't leave any traces in the Windows Registry. You can copy it on any USB flash drive or other devices, and take it with you whenever you need to conceal drive letters on the breeze, without having to go through installation steps. Simple looks You are welcomed by a clean feature lineup that allows you to carry out most operations with minimal effort. Everything is kept as simple and clear as possible, so there's support for only a few dedicated parameters to tinker with. How it works Hide Drive automatically detects all drives letters and displays them in the primary panel. What's more, you are allowed to select the drives that you want to conceal, check or uncheck all of them, as well as apply the current changes and exit the program. The tool automatically restarts your computer in order to make the adjustment to your system, so it is recommended to save your work before triggering the process. Additionally, you can make the program skip the reboot process but the changes are not applied until you restart the computer. You should take into consideration that the hard drives are only concealed from prying eyes but they can be accessed. On the downside, the utility doesn't offer support for a master password, so users may easily change the current settings and have access to your private information. Bottom line All things considered, Hide Drive proves to be a simplistic piece of software that comes bundled with limited features for helping you hide drive letters from any standard Windows panels.Hide Drive Specifications: Hide Drive is a small application designed with a single goal in mind: to help you hide drive letters from any of the standard Windows panels, including Windows Explorer and My Computer. ## Hide Drive Free License Key [Updated]

KeyMacro is a small, free and easy to use program that will allow you to create custom shortcut buttons that can be triggered by a simple shortcut key. Keyboard shortcuts are essential for every computer user and it's common knowledge that a collection of various custom shortcuts can drastically improve productivity. Simple application The user interface is very simple and there's no fuss of setup wizard. Upon starting, you'll be asked to press the Delete key to create your own custom shortcut. After that, the program will ask you to select the text that will be displayed on the button and the key you want to associate it with. The solution is very simple, yet it can be a little tricky sometimes due to the fact that you can't drag and drop the text or the key. Once you are done with the simple steps, KeyMacro will ask you to click the New button to start creating your own shortcut keys. On a default installation, the program includes shortcuts for opening up different programs and the internet, as well as for controlling music player and volume. How it works As with any other software, KeyMacro has its own configuration interface, where you can customize all aspects of your shortcuts, including the label, shortcut key, and shortcut text. It is pretty simple and there's not much to learn about it, and that is the biggest advantage of the program. If you have a quick eye for keyboards, you can be sure that it's not that complicated. A couple of shortcuts can be set up manually, but the rest will be automatically created for you. To do that, the program will look for all shortcut texts that you have ever added, as well as for those already existing on your system. The first part is a little problematic, though, as it cannot be easily modified. KeyMacro will automatically use the keyboard of your main computer to create the custom shortcuts for you, so you shouldn't have any problems with it. A word of caution If you have more than one shortcut key on your keyboard, you'll be asked to choose which one to use in order to create the custom shortcuts. In such a case, it's recommended to either click the advanced button and choose the specific shortcut key, or to set the shortcut manually. KeyMacro comes with a limit of 5000 shortcut keys that you can create, so you'll have to adjust the configuration settings accordingly 1d6a3396d6
