KeyMacro is a free utility designed to let you create shortcuts that will run a macro on a Windows computer. It's very similar to AutoHotkey, and therefore the features are fairly similar. However, in terms of stability, it does not seem to have the same number of problems. You can add a new shortcut with just a few clicks, and you can also edit an existing one. Keyboard macros are extremely useful. You can use them for complex operations, such as automatically typing text in many fields or applications, or perhaps even fixing typos. You can also use them for common tasks that you don't want to do more than once. It's a handy way to automate repetitive actions. After making a macro, the program will show you a list of all the possible commands, and it will ask you what you want to do with them. There are only a few options to choose from. First, you can execute the command in the context of the main window of the application. In the case of the example I gave, this would mean that the current active window would be used as the context. Second, you can run the command as a minimized window. This

will open the window, but it will not take over the whole desktop. This is useful for example if you're using the program under the screen. Finally, you can activate the macro without opening the target window. There is an easy way to save a macro, and this is done by double clicking the macro. Once the macro is saved, you can copy and paste it to another computer, or you can even just copy it into a plain text document. The next step is to assign a shortcut to the macro. This is done with a right-click on a window, and you can just select the KeyMacro icon. The shortcut will be displayed next to the window, along with the rest of the currently existing shortcuts. Alternatively, you can right-click on a blank area of the desktop and choose the Add shortcut… option. A new window will pop up, and you will be able to select a shortcut key to use. After you select a shortcut key, you can select a specific command, or just let the program choose one. Once the shortcut is created, it will appear in the list of available shortcuts. After clicking on it, you will be able to use the shortcut without it being saved, which is very convenient. The only downside of the software is 77a5ca646e

Trickster IV by Riq Now that the hard work is done, it's time to party. Riq brings Trickster IV, a small and simple to use application dedicated to quick mouse clicks. You can use it on any desktop with the Windows logo displayed in the taskbar. Of course, this requires Windows 7 or higher. It's all very easy to set up, with a dialog providing a list of presets you can use on the go. You can just pick them up and use them without any additional input. The installer offers a couple of optional presets as well. You can also define the execution parameters, such as the name of the shortcut to be launched, or the window to be displayed. If you decide to add another parameter, you'll have to specify the value. Paste the list of available shortcuts into your shortcut collection and get the party started. The application offers a simple shortcut menu that allows you to copy, paste, modify, or even remove shortcuts. Additionally, multiple folders and drives can be used to add more shortcuts. If you're looking for a product to quickly launch anything that comes to mind, this should work just fine for you. You can also make it work as a handy utility for launching certain tasks from a custom shortcut menu. Additionally, you can set your own shortcuts to the.exe files as well. Trickster IV Description: 1. You can have a custom shortcut menu for launching almost anything. 2. You can launch an application with one click. 3. You can set a custom shortcut menu for launching applications. 4. You can have a custom shortcut menu for launching any application. 5. You can use this application on any computer, even if you don't have a Windows logo on your desktop. 6
