Adobe Bridge Many serious photographers use Adobe Bridge to organize and manage images. It's a _database_ program that enables you to view, search, and tag images. You can automatically create and maintain contact information, delete unwanted images, and even delete images automatically when you exceed a certain number of images, depending on the version of Bridge you use. Bridge is a wonderful tool. Many people use it exclusively to manage their images. But, you should keep in mind that you can view your images from Photoshop, the Web, or on your hard drive. The Bridge database and associated programs are only used to create and maintain your images.

The PSE program allows you to edit and create all kinds of images, such as still images, video, drawings and more. It's a feature-rich program, even though it is not as powerful as the full-blown Photoshop or other graphics software. PSE comes with a free trial period of 30 days. This article will help you use the most common features available in PSE to make graphics and images.

1. Opening an Image in Photoshop Elements To open images in Photoshop Elements, right-click on the file or navigate through the file menu on your computer to open the file. Below is an example of opening an image in PSE to review the content of it: If you have the right click set to Copy Location, you can rename the file later on. If you are not sure whether or not you have the right click set to copy the location, click the drop-down menu on the top right corner of the browser window to open the "Edit Computer" window. "Open Window" is the name of this option, located in the "File" tab: "Open Window" will open the file in a new window. You can access the file in the new window as you want, even view it in the original program.
2. Adding Text to Images in Photoshop Elements To add text to an image, open the image you want to use. The easiest way is to double-click it from the "File" menu and it will open the image in a small window. Tip: You can also drag and drop the file into this window to open the image. When the image is opened, the cursor will be on the image and ready to add text. Hold the Shift key to keep the cursor always in the same position when editing. You can create different text objects by using the "Text" tool found in the toolbox at the bottom of the main screen. To write text:
 - Click "Text" in the toolbox to open the "Text" tool.
 - Click once on a point on the text you want to use and then click again on the next point. Then repeat to create as many points as you want for the text you want to write.
 - Click and hold the Shift key to keep the text always in the same position when moving.To edit text:
 - Click once on the text you
